PRE-SEED · AGENTIC AI FOR PRODUCTION

stitchgrid.

The AI production office for brands.

We start with apparel sourcing, then run the entire order as your outsourced back office.

Think of us as your production team, run by an agent. Send a photo, a description, or a sample. We turn it into a tech pack, source vetted factories, run sampling and fitting, and bring back one comparable quote at true landed cost. A signed PO in days, not nine months.

AVI SACHDEV · FOUNDER · AVI@STITCHGRID.COM

NEW YORK · 2026

I have lived all three sides of this problem.

BORN INTO IT

My family runs a garment manufacturing business, the reason we came to America in the 1980s. I grew up in this world and still have relationships that move product into major retailers.

FAMILY BUSINESS SUPPLIES

TJ Maxx · Macy's · Nordstrom · Ross · Burlington

BUILT THE SOFTWARE

Five years at Rent the Runway building fashion, logistics, and operations at scale. At Momento Market, I worked inside a two-sided marketplace. StitchGrid needs both.

CAREER

Rent the Runway · Momento Market

BECAME THE CUSTOMER

I founded Both Tails, my own apparel brand, and lived the sourcing grind firsthand. I took it to market across every major channel and am building the tool I needed.

BOTH TAILS SELLS THROUGH

Amazon · Walmart · Chewy · Kohl's · TikTok Shop · Shopify

I grew up in this world, built the software, then became the customer.

THE PROBLEM

Brands waste months before production even starts.

01	**Find the factory**	A production order can take months to source, vet, negotiate, and move into production.
02	**Decode the quote**	Brokers hide 10 to 20% inside the quote. Freight, duties, tariffs, and QC show up later.
03	**Run the order**	After the PO, no one owns the operating system: approvals stall, context gets lost, risk is found late, and brands manage by escalation.

SOURCING AGENTS

Expensive

Premium fees without a shared production record

ALIBABA

Unvetted

Endless suppliers, little signal on who can deliver

TRADE SHOWS

Inconsistent

Limited supplier coverage; the work still moves back to email

Sourcing is becoming software, not headcount.

01 · READ

Turn the brief into a spec

Interpret photos, descriptions, measurements, and prior samples. Produce a factory-ready tech pack.

02 · DECIDE

Rank the right factory

Compare capability, MOQ, lead time, certifications, capacity, and past delivery behavior.

03 · RUN

Keep the order moving

Read replies, normalize quotes, chase approvals, flag risk, and update every connected system.

SOFTWARE LEVERAGE

A sourcing agency scales by hiring coordinators. StitchGrid scales the same work through software, so GMV can grow without expenses rising linearly with headcount.

A photo in. A signed PO out.

01 · INPUT	02 · AI	03 · MATCH	04 · AI	05 · APPROVE	06 · DELIVER
Photo, sketch, or sample	**Tech pack**	**Vetted factories**	**Quote at landed cost**	**Signed PO**	**Production to shipment**

A brand sends us a product idea. StitchGrid writes the tech pack, sources factories we have vetted in person, and returns comparable quotes at true landed cost.

The brand approves the factory and price. The same agent follows the order from signed PO through shipment.

AI does the language work. The brand keeps every decision.

TAM · SAM · SOM

The first U.S. beachhead can support a $50M business.

Bottom-up sizing starts with brand customers. Manufacturers, suppliers, global brands, and attached services are expansion upside, not yet modeled here.

U.S. CUSTOMER UNIVERSE

$1.76B

52,909

brands + retailers

Brand owners, retailers, and operators who can start with sourcing or SaaS

INITIAL SAM

$399M

12,000

target U.S. brands

Proprietary product, outsourced production, relevant size, and reachable

YEAR 5 SOM

$49.9M

1,500

active customers

1,500 customers at $33.3K annual revenue per customer across SaaS and sourcing

At scale: $8.1K average SaaS ARR + $25.2K average sourcing revenue = $33.3K annual revenue per active customer.

Source: U.S. Census Bureau 2022 retail-firm count. SAM filters and revenue per brand are company assumptions.

PRICING ARCHITECTURE

One production OS.
Use your suppliers, and ours.

Every customer runs production in the same OS. Brands using our factory network also pay a sourcing take rate.

STARTER

$249 / mo

Small brand

Core production workflows for a lean team

GROWTH

$499 / mo

Scaling team

More orders, users, automation, and integrations

ENTERPRISE

Up to $2,499 / mo

Complex operation

Multi-team controls, custom integrations, SLAs, and support

MANAGED SOURCING TAKE RATE

5%, 7%, or 10% based on PO size and service scope

Illustrative packaging informed by founder experience and early discovery. It remains to be validated with paid customers.

GO TO MARKET

Land one urgent SKU. Expand across the catalog.

We start with brands that have production intent now, not a narrow revenue band.

01 · FIND DEMAND

Active POs

Founder and family network

Sourcing agents

DTC and Shopify partners

02 · COMPLETE THE ORDER

Prove trust

Vetted factory match

Comparable landed cost

One successful SKU

03 · GROW GMV

Expand both sides

More styles per brand

More repeat production

More diverse factories

THE MARKETPLACE COMPOUNDS

More brand demand attracts better factories. More diverse factories improve outcomes. Better outcomes move more of each catalog onto StitchGrid.

WHERE WE ARE · PHASE 0

Early, but the signal is real.

24-48h	$100K+	10	3
Brief to first quote. The old process takes weeks of back-and-forth.	Estimated value of the proposed pilot production order.	Factories vetted and onboarded to the network.	Sourcing agents across five countries.

ONE SKU · ONE PILOT

The current pilot scope is one SKU. Early conversations indicate potential to expand across the catalog after the first order delivers.

Two to three additional brands are in early conversations. These are signals, not paid or contracted commitments.

FIVE-YEAR SCALE SCENARIO

Approaching $50M in annualized revenue.

SaaS ARR is shown separately from transaction revenue. This is an assumption-driven scenario, not a forecast.

	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
ACTIVE BRANDS	10	61	225	650	1,500
SAAS ARR	$0.03M	$0.21M	$1.13M	$4.22M	$12.13M
TAKE RATE	$0.05M	$0.64M	$3.31M	$12.28M	$37.80M
TOTAL	$0.07M	$0.85M	$4.44M	$16.50M	$49.94M

1,500

ACTIVE BRANDS

10% qualified conversion · 60-day sales cycle

YEAR 5 REVENUE BRIDGE

900	brands using sourcing
× $600K	managed GMV per brand
× 7%	$37.8M take-rate revenue
+ $12.1M	SaaS ARR
= $49.9M	annualized revenue

StitchGrid.

Company scenario. See the accompanying model for customer, CAC, GMV, churn, and conversion assumptions.

WHY BRANDS STAY

The marketplace earns the first PO. The OS earns the next ten.

SYSTEM OF RECORD

Tech packs, sampling rounds, normalized quotes, approvals, POs, QC evidence, and delivery status stay together.

SUPPLIER GRAPH

Cost, response time, sample accuracy, quality, exceptions, and delivery behavior improve every future match.

PLATFORM RETENTION

Freight, storage, payments, and future financing can attach to the same order without fragmenting the workflow.

THE COMPOUNDING LOOP

Brands can contact a factory directly. They stay for the operating record, supplier intelligence, workflow automation, and attached services.

THE ASK

Back the platform that makes the broker obsolete.

StitchGrid wins the first PO through the sourcing marketplace, then earns recurring revenue by running production from brief to shipment.

$500K

Pre-seed to ship the core OS and complete the first paid cohort.

10 BRANDS

Prove conversion, SaaS attach, repeat POs, and CAC.

ONE WEDGE

Marketplace entry, recurring software, and supplier intelligence on the same order flow.

Founder-owned, clean cap table, minimal burn. Valuation to discuss.
