

stitchgrid.

The AI production office for brands.

We start with apparel sourcing, then run the entire order as your outsourced back office.

Think of us as your production team, run by an agent. Send a photo, a description, or a sample. We turn it into a tech pack, source vetted factories, run sampling and fitting, and bring back one comparable quote at true landed cost. A signed PO in days, not nine months.

Emerging brands lose months before production even starts.

- 01 Find the factory**

A 2,000-unit order can take 6 to 9 months to source, vet, negotiate, and move into production.
- 02 Decode the quote**

Brokers hide 10 to 20% inside the quote. Factories price goods while freight, duties, and tariffs arrive later.
- 03 Run the order**

Samples, approvals, PO changes, QC, and shipment updates live across email, spreadsheets, and chat.

The market does not need another directory. It needs the production work to get done.

Every option stops at the introduction.

01 • BACK-CHANNEL AGENTS

Who you know

Relationship-based middlemen take 10 to 20% with no transparent workflow or durable record.

02 • ALIBABA

A directory

Search results do not run samples, compare landed cost, monitor QC, or follow the order to shipment.

03 • TRADE SHOWS

A moment in time

Flights, booth fees, and a few days to meet suppliers. Then the work moves back to email and hope.

None of them owns the work after the handshake.

The transaction is the wedge. The workflow after it is the company.

I have lived all three sides of this problem.

BORN INTO IT

My family runs a garment manufacturing business, the reason we came to America in the 1980s. I grew up in this world and still have relationships that move product into major retailers.

FAMILY BUSINESS SUPPLIES

TJ Maxx · Macy's · Nordstrom · Ross · Burlington

BUILT THE SOFTWARE

Five years at Rent the Runway building fashion, logistics, and operations at scale. At Momento Market, I worked inside a two-sided marketplace. StitchGrid needs both.

CAREER

Rent the Runway · Momento Market

BECAME THE CUSTOMER

I founded Both Tails, my own apparel brand, and lived the sourcing grind firsthand. I took it to market across every major channel and am building the tool I needed.

BOTH TAILS SELLS THROUGH

Amazon · Walmart · Chewy · Kohl's · TikTok Shop · Shopify

I grew up in this world, built the software, then became the customer. Three sourcing agents already cover five countries.

WHY NOW

AI can finally do the work brokers charge 10 to 20% to perform.

01 • READ

Turn the brief into a spec

Interpret photos, descriptions, measurements, and prior samples. Produce a factory-ready tech pack.

02 • DECIDE

Rank the right factory

Compare capability, MOQ, lead time, certifications, capacity, and past delivery behavior.

03 • RUN

Keep the order moving

Read replies, normalize quotes, chase approvals, flag risk, and update every connected system.

SOFTWARE LEVERAGE

A traditional sourcing office grows by adding coordinators. StitchGrid automates the language-heavy work so GMV can grow faster than headcount.

A photo in. A signed PO out.

A brand sends us a product idea. StitchGrid writes the tech pack, sources factories we have vetted in person, and returns comparable quotes at true landed cost.

The brand approves the factory and price. The same agent follows the order from signed PO through shipment.

AI does the language work. The brand keeps every decision.

Software creates the floor. Production creates the upside.

A brand can bring its own suppliers or ask StitchGrid to source the order.

APPAREL OS

\$149 to \$2,499 / month

For brands running production with their existing supplier network.

MANAGED SOURCING • ONE ILLUSTRATIVE ORDER

5

STYLES

×

10K

UNITS EACH

×

\$10

PER UNIT

=

\$500K

SOURCED GMV

→

\$25K

AT A 5% TAKE

5% introductory pilot rate. Standard managed sourcing is expected to price at 7% to 10%.

The first order generates revenue. Every order after increases LTV.

The subscription can begin before or alongside the first PO. The take rate grows with managed production. The operating record makes StitchGrid harder to replace after every order.

01 • RECURRING FLOOR

\$149-\$2,499 / mo

Tech packs, approvals, POs, production status, and connected work.

02 • TRANSACTION UPSIDE

5-10% / order

Revenue scales with the production GMV sourced and managed through StitchGrid.

03 • LTV EXPANSION

Catalog, not one SKU

Land one urgent order, then expand across more styles, suppliers, and production cycles.

Pricing is informed by founder operating experience and early customer discovery, not contracted revenue.

This round proves SaaS attach, a second PO, and expansion beyond the pilot SKU.

Land one urgent SKU. Expand across the catalog.

We start with brands that have production intent now, not a narrow revenue band.

01 • FIND DEMAND

Active POs

Founder and family network

Sourcing agents

DTC and Shopify partners

02 • COMPLETE THE ORDER

Prove trust

Vetted factory match

Comparable landed cost

One successful SKU

03 • GROW GMV

Expand both sides

More styles per brand

More repeat production

More proven factories

THE MARKETPLACE COMPOUNDS

More brand demand attracts better factories. More proven factories improve outcomes. Better outcomes move more of each catalog onto StitchGrid.

Early, but the signal is real.

24-48h

Brief to first quote. The old process takes weeks of back-and-forth.

\$100K+

Estimated value of the proposed pilot production order.

10

Factories vetted and onboarded to the network.

3

Sourcing agents across five countries.

ONE SKU • ONE PILOT

The current pilot scope is one SKU. Early conversations indicate potential to expand across the catalog after the first order delivers.

Two to three additional brands are in early conversations. These are signals, not paid or contracted commitments.

WHY BRANDS STAY

The marketplace earns the first PO. The OS earns the next ten.

SYSTEM OF RECORD

Tech packs, sampling rounds, normalized quotes, approvals, POs, QC evidence, and delivery status stay together.

SUPPLIER GRAPH

Cost, response time, sample accuracy, quality, exceptions, and delivery behavior improve every future match.

PLATFORM RETENTION

Freight, storage, payments, and future financing can attach to the same order without fragmenting the workflow.

THE COMPOUNDING LOOP

Brands can contact a factory directly. They stay for the operating record, supplier intelligence, workflow automation, and attached services.

THE ASK

Back the operating system behind every emerging brand.

StitchGrid wins the first PO through the sourcing marketplace, then earns recurring revenue by running production from brief to shipment.

\$500K

Pre-seed to ship the core OS and complete the first paid cohort.

10 BRANDS

Prove conversion, SaaS attach, repeat POs, and CAC.

ONE WEDGE

Marketplace entry, recurring software, and supplier intelligence on the same order flow.

Founder-owned, clean cap table, minimal burn. Valuation to discuss.
